**52- Some people think that human needs for farmland, housing, and industry are more important than saving land for endangered animals. Do you agree or disagree with this point of view? Why or why not? Use specific reasons and examples to support your answer.**

Needless to say, the human are use to consuming all the resources of the environment permanently in order to fulfill his requirements ; he deforests for building new cities ,and cuts the trees for making the fire of their wood or expanding the agriculture land to produce food and so on .While a lot of people believe that human needs for farmland ,housing ,industry is more important than saving land for protect animals ,from where I stand , nature belongs to animals and we cannot deprive them from it.

first of all , to-day a lot of unique ,unprecedented breed of animals are exposed to extinction ;it is very important problem which a lot of scientist are anxious about because if they lose their environments ,our lives will damage seriously ;for instance, some of the species supply foods for other kinds of creatures ,and also they play indispensable role in wild world . If we do not preserve their breeds ,some times our own lives will be interrupted --the nature cycle perturbs .We ,hence, have to protect their lands to prevent agitating the environment .

Although we should be concerned about the animals lives , sometimes human have to destroy the wild world for continuing his life because the rate of growth of population increases incessantly ,so they need more foods staples , houses ,and also they need work in some industries and other facilities ; humans have to disturb and damage some part of nature to rescue themselves.

To conclude ,I whole -heartedly believe that animals live in this planet ,so they should have safety –protecting lives as other creators ,living here .Mankind should find a way to solve this trouble and provide their vital requisites .

**Comment: Nice Essay.**
