

There have been many technological developments in the 20th century, for example in transport, telecommunication and health.

What technological development do you think has been the most important? How has it changed people's lives? Have all the changes been positive?

Source: Preparation and practice page 135

Nowadays technology has unbelievable speed in proceeding without any interval. Its effect spectrum spread through human life, namely: Communication, Medical science, Computer and transport. While generally people mind you to computers and telecommunication **devices** (*means*) and they think it is single side of technology; from my point of view, **transport** is placed in the first stage of importance which I'd like to refer to some aspects.

Initially, it creates a safe travel with highest securities. Technology for the sake of secure transportation, suggests many stylish planes. For instance, in air industry transportation we face with huge steps toward future. A couple of days ago one airplane belonging to American airline had **a** essential landing in a river with roughly 200 passengers and crews: **which all of them** (*all of whom*) safely had left the airplane.

The pilot said "I strongly believe, we **are** owe to the design of airplane which assist us to survive"

Second, development of technology, as well had enormous change on all kind of pollutions –sound pollution and especially air pollution. The scientists got assistance from new generation of fuel which secures the lives of some special species of plants; they could decrease approximately %50 of air pollution by airplanes.

Furthermore, they have had successfully tests on cars and others vehicles.

Last but not least, I want to highlight many update facilities which are **using** (used) in vehicles and public **transport**. They make passengers comfort and ease journey even in long-distant travels.

In conclusion, in this regard, the progress in technology is not a bit to disregard, also I totally assume which these changes **have been effected** (affected) transportation more than other departments and all of them is positive for human generation.
